## **Attention All Nissan Leaf Owners**

### **Lithium Ion Battery Degradation**

All electric vehicles at some point in its life cycle will require replacement of the Lithium Ion battery pack. We are proud to announce that Cayman Automotive Leasing, Sales and Service has reached agreement with Nissan North America to purchase new and improved Lithium Ion battery packs for Nissan Leaf owners in the Caribbean. Thanks to this exclusive arrangement, Cayman Automotive Leasing has now obtained the required factory authorization, equipment, and specialized training necessary to perform this vital service right on-Island. If you are the current owner of a Nissan Leaf and have noticed that your range has been significantly reduced, or requiring more frequent charging, this usually a sign of permanent cell/pack capacity loss.

Starting in January 2019 Cayman Automotive is launching an all-new Leaf battery service program in which we will test your battery pack using state-of-the art Nissan Consult equipment FREE OF CHARGE. To obtain this Pack State-Of-Health report simply make a service appointment at our CAL Service Center by calling 947-0900. As part of this FREE service, we will be able to provide each customer with a printed report of battery cell module state of health and life expectancy. Based on these results and the Year/Model of Leaf we will also provide a quote for pack replacement if required.
